

WHISTLER

PEDIGREE ▶ CO08W218 / SNOWMASS // BYRD

Released in 2018, Whistler is an attractive high yielding variety that is later maturing, with taller plant height. Intermediate against stripe and leaf rust, resistant to stem rust, and very good resistance to soilborne and mite transmitted mosaic viruses. Focus planting on dryland acres only, given this variety has marginal straw strength under high moisture. Considering its later maturity, plant in sequence with earlier maturing varieties to expand your harvest flexibility. **PVP Protected; to be sold by variety name only as a class of certified seed.**

MANAGEMENT NOTES

- Excellent choice for virus prone areas
- Plant seeds/acre and manage population with soil type (heavy soil, higher population, lighter soil, lower population)
- Use a plant growth regulator in high yield environments
